Anatomy of the FlipVideo

1. Here is our FlipVideo camera

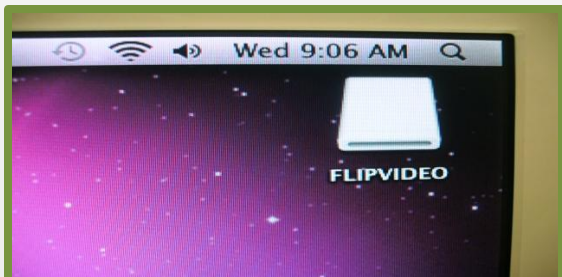

2. Pull down the switch to release the USB connector

3. The back controls consist of the red record button, the play button, the delete button, and the 4 way controller.

4. Gently insert the FlipVideo into your USB port. If available use a USB extension cable.

5. Wait for the computer to recognize the camera and then you can import your videos to the computer.

The **FlipVideo** is capable of saving up to 2 hours of video. It both transfers videos and charges by way of its flip out USB connector. It has minimal controls to make it very easy to use. The controls are as such:

The **front** of the camera consists of the lens, the microphone and the recording light.

The **bottom** of the camera consists of the tripod mount and the battery cover release.

The **side** of the camera consists of the usb connector and it's release button and the tv out connector.

The **opposite side** of the camera consists of the strap eyelet and the power button.

The **back** of the camera consists of the viewing screen, the play button, the delete button, the red record button and the 4 way controller.

Basic Operation

1. Turn on the Camera using the power button
2. To record press the red record button. To stop recording press the button once more.
3. Use the left & right directional controllers to view the saved videos.
4. Use the up & down controllers while filming to zoom in & out. When viewing a previously recorded video up & down controls the volume.
5. Press the play button to view a previously recorded video.
6. press the delete button to delete previously recorded video. You can delete them individually or all at once. Please use caution not to delete the wrong video.
7. Press the power button to turn off the camera.
